

Keep moving forward.

Oticon ♦ **Dual**
Connect

Life without boundaries. Hearing without limits.

The pursuit of good hearing can seem like a long journey. Take the right path with Dual.

As you experience hearing loss, you can do one of two things: you can keep moving forward and take control of your condition, or you can let it take control of you — causing you to retreat more and more from the normal, day-to-day activities that make life so rewarding.

At Oticon, we developed Dual for those who choose to move ahead — to accept life’s challenges, to feel good about themselves and to continue to make the most of the world around them.

Dual will help you through life’s ever-changing soundscape, guiding you along the journey to better hearing with dramatic new standards in design, sound quality, comfort and convenience.

Dual delivers state-of-the-art technology that brings more natural hearing back into reach. And, its outstanding performance is coupled with advanced and highly functional design. The result is an exceptional hearing system you’ll feel great about wearing.

It’s time to experience life without boundaries, hearing without limits. Because now you have Dual to lead you forward.

**Hear more sounds,
more naturally.**

A cork in the ear ... that's how many wearers of traditional, custom-molded "in-the-canal" hearing aids describe how it feels. Beyond the bulky discomfort, the sound can be hollow and unnatural, as if "talking in a barrel".

Those days are gone. Dual is the closest a hearing system can get to restoring the natural hearing experience. A Dual in one ear actually communicates with the other, simulating the way the brain processes multi-directional sound. Now you can hear the world again the way it was meant to be heard.

With its “open fit” design, Dual keeps your ear canals open to sound rather than closing them off. This helps eliminate the “plugged up” feeling, as well as annoying feedback and whistling. Dual users describe the sound quality as clean and bright, providing a refreshing sense of relief and relaxation.

Communicate more easily in noise.

In restaurants and social gatherings, conflicting sounds come from everywhere, making it difficult to keep up with what's going on. Instead of asking others to repeat themselves, you may find yourself retreating into an isolated existence — one where silence isn't so golden.

Dual helps you maintain vital social interactions with relatives, friends and co-workers, even when the surrounding conditions make hearing a challenge.

For example, to determine whether a particular sound needs your attention, you need to know what it is and where it is coming from, as well as who is speaking and what is being said. A pair of Duals communicate wirelessly with each other to function as a “sound compass”, working to preserve the location and direction of sounds. So not only will you be able to direct your attention to what is being said, you can also improve your understanding.

Leave behind the challenges of using the telephone.

Using a telephone can be a source of stress when you wear a hearing device. The sound of an incoming call may cause you to hesitate when answering it. This apprehension can become even more apparent if you need to take a call while driving your car.

Dual makes it possible to have a normal telephone conversation without the feedback or squealing that can ruin a productive discussion. That includes both land lines and cellular phones.

No longer will you need to ask someone else to pre-screen incoming calls. No longer will you refrain from talking to others because you struggle to hear or communicate with them. No longer will you find it necessary to put on the speakerphone and turn the volume up. With Dual, you'll feel more relaxed when you're speaking, and more confident that you won't miss a single detail.

Enjoy watching television with family and friends again.

Television can be especially challenging to watch and hear at a volume level that suits you, without overwhelming others in the room. By missing out on what's being broadcast, your sense of feeling connected and relevant is compromised.

Dual enables you to view and understand television audio at a volume level that works for you, from anywhere in the room, without disturbing others. So rather than retreating to another room to watch shows on your own, tuning into your favorite programs can be a group activity.

From staying on top of the latest news, to sharing a laugh as you watch a comedy, to humming along with the melody and lyrics of a song, Dual lets you participate in the viewing experience by hearing what everyone else hears with greater ease and comfort.

Dual redefines comfort, style and ease of use.

Dual's lightweight, slim design is cosmetically appealing and hides discreetly behind the ear. Dual comes in an array of fashionable colors to match your hair or skin tone or even your personality.

Unlike previous hearing instruments, micro-miniaturization and digital electronics eliminate the need for cumbersome controls that can distract you from a satisfying hearing experience. With Dual, simply wear it and forget it.

Dual Connect comes in three different price points. Talk to your hearing care professional to find out which one is right for your specific needs.

The Streamer — Dual's handy optional accessory.

With Dual, you also have the option of using a companion device called The Streamer. At the press of a button, you can answer your cell phone without even touching it.

The incoming caller's voice is automatically — and wirelessly — channeled into both your ears. The Streamer in fact turns a pair of Duals into a tiny, hi-tech cordless headset.

The Streamer also enables the signal from your TV, MP3 player or personal computer to be wirelessly transmitted to your Dual hearing system at the right sound level for you, with no distortion or delays.

**It feels good to get back
where you belong.**

Hearing is your connection to life around you. It's not only about the way you listen, interpret and respond, it's also about your ability to absorb and make use of information available from a variety of sources.

On your journey away from hearing loss, Dual will be a resource that helps you experience life with the clearest and most realistic hearing possible in any listening situation. Thanks to true binaural sound technology, you can enjoy the natural fidelity of all voices and sounds, with the ability to locate where they originate from. So not only will you be able to perceive what is being said, but you can also improve your understanding.

You've never let obstacles get in the way of your personal goals. Hearing loss should be no exception.

Welcome to Dual: taking you farther ahead along the journey to better hearing.

People First.

15500-1063/11.08

We believe that it takes more than technology and audiology to create the best hearing instruments. That's why we put the individual needs and wishes of people with hearing loss first in our development of new hearing care solutions.
